

Data Model

		Controlled vocab (LOD) for periods?	Languages, types of scripts, etc.			Gazetters (LOD)? Nested administrative units by period might be too much to ask/dream		Accessibility (state of access, versus state of digitization-are these combined or separated?)
Collection name or title	Author or creator	Date (do calendars matter?)	Language	Host institution or original location	Material type (image, audio, etc)	Geography (creation or content)	Resource type (digital reproduction/remediation)	Key words (is this tagging or searching across all fields?)
Comes from finding aid	Comes from finding aid	Come from finding aid; dealing with cataloging errors/inconsistencies	Some language information would come from finding aid; would also need to be able to modify this field	Come from finding aid or digital interface	Different ways to define material type-thinking about different user groups and how they will search/	Dealing with changing geopolitical landscape in terms of geographic units and borders; question about creating collection	Noting objects that have been submitted by users or significantly	Separate keywords (or tags/notes) field, versus full-text search across all data fields
